

EXTRA FONTS DISC N°3

From the creators of MicroDesign2

This disc contains a variety of new typefaces and character designs which extend the capabilities of MicroDesign2 in two ways ...

Firstly, by adding more Font files. These files can be found on the side of the disc labelled .MDFs. They may be used for Typesetting and Writing in the normal way, and include a range of decorative and standard typefaces to complement the existing library of fonts for MicroDesign2.

Secondly by increasing the size of available characters. The .MDAs side of this disc contains sets of larger lettering styles stored as MicroDesign2 Area files. These larger designs may be cut and pasted into headlines, banners etc.

A full catalogue of all these Fonts and character sets is provided in this booklet.

CATALOGUE - EXTRA FONTS DISC N°3 - .MDFs SIDE

The following font files are supplied on the .MDFs side of the disc. All have an .MDF suffix, and can be loaded into MicroDesign2 using the LoadFont..f3 operation in any of the Layout, Design or Fonts sections of the program.

Although designed at a particular point size, they can all be rescaled using the Scaling..f7 menu within Typeset and Write ... various fonts work at various different sizes, so experiment! If you find a particular rescaled size which works well for a font, either write down the relevant numbers, or save the current Template (which will save the point size etc too).
